

Page Object Model without Page Factory

Mukesh Otwani

<http://www.learn-automation.com>

Agenda

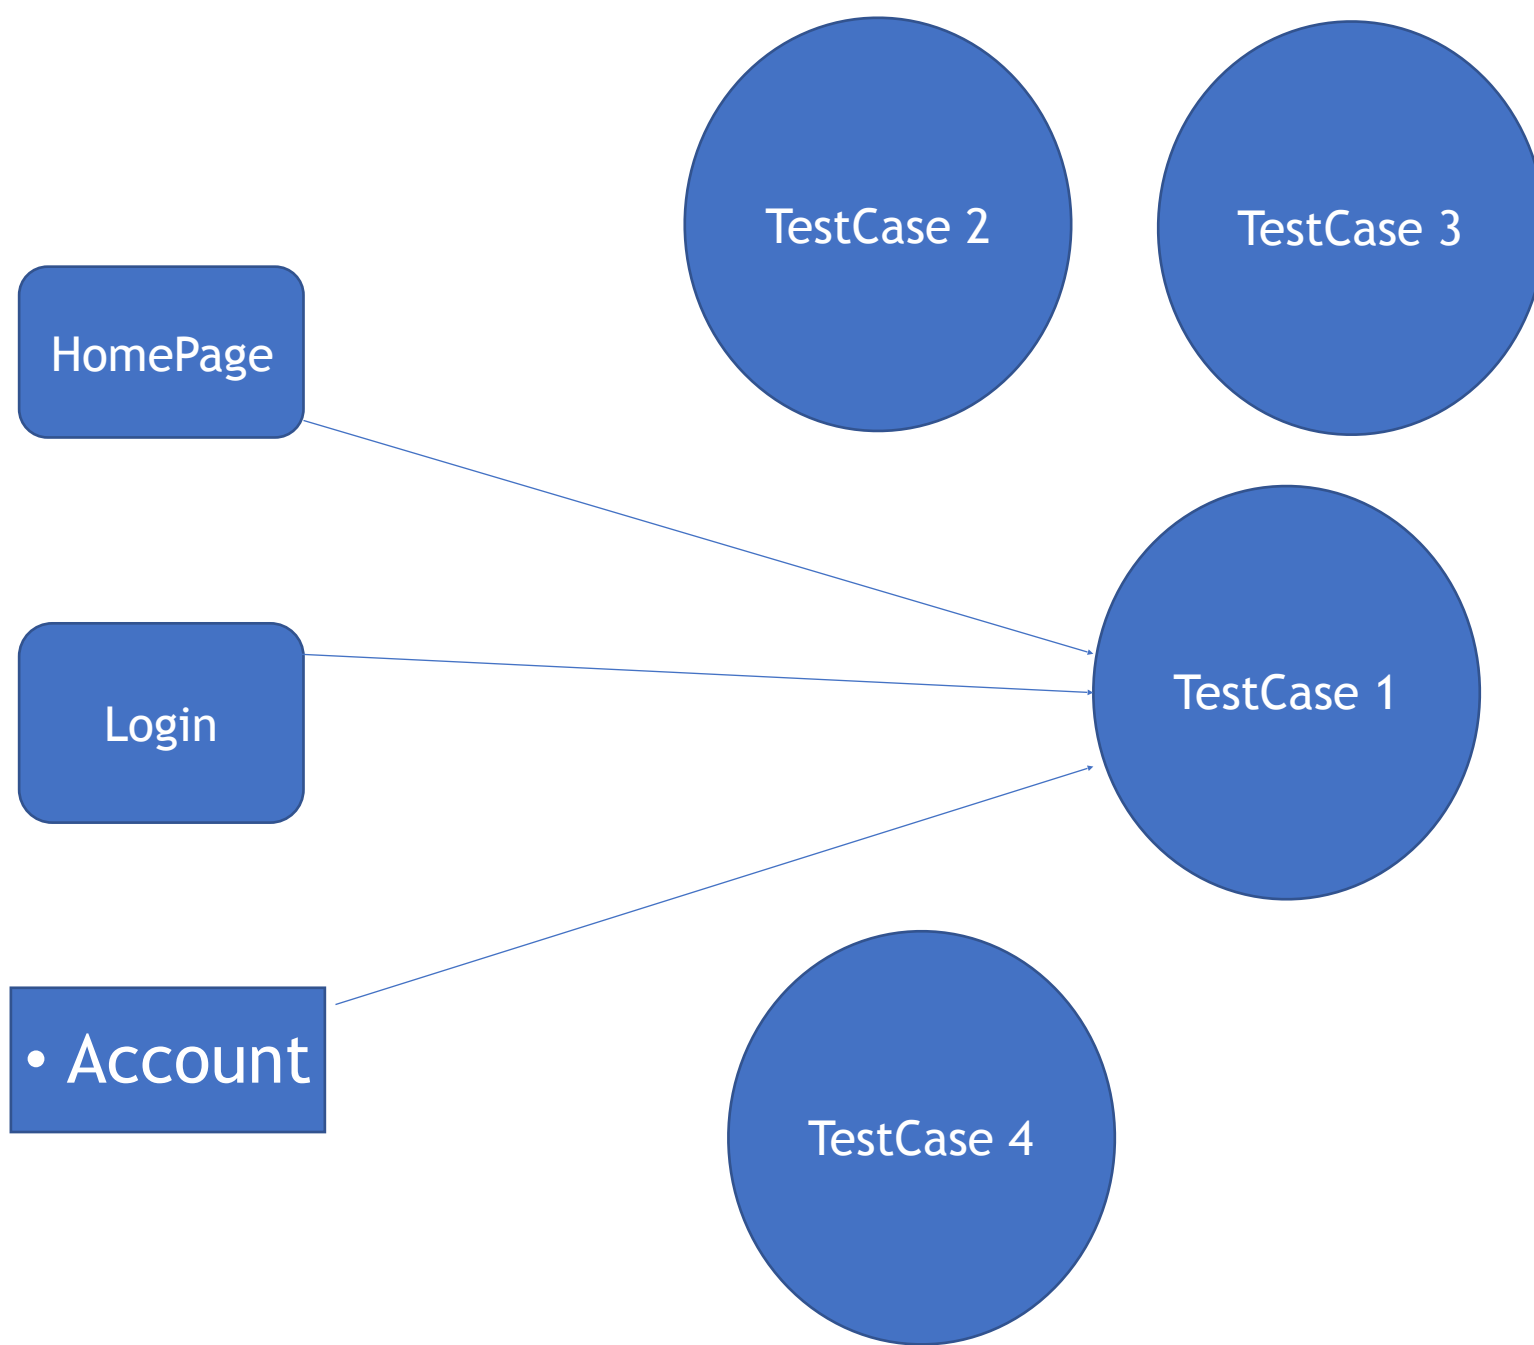

- What is Page Object Model
- What is the need of POM
- How to implement POM in Selenium Webdriver

Page Object Model

- Page Object Model is just a design pattern not a framework.
- As the name says We will be working as pages (pages will be pure Java Classes)
- Based on application behavior we will be creating separate Pages and will store all the locator and respective method to use them

Advantage

- Script will be more readable format
- Using POM you will be able to achieve below three features
Easy to maintain, readable format, reusable scripts.

- 2 ways to implement
- Using normal approach
- Using PageFactory and @findBy
